Dear Elisabet

REACH REGULATIONS

Re: Irreversible Temperature Indicating Strips and Chromazone Inks

Irreversible Strips and Chromazone Inks are non electronic temperature indicators. Composition varies according to range and type. They are printed laminates composed of self-adhesive films (with modified acrylic adhesives), polyester film or polyimide film (according to type), paper and various organic crystalline waxes.

The chemicals present are proprietary, non-hazardous and comply with RoHS, WEE and REACH Directives.

As part of our on-going commitment in ensuring that we comply with all legislative requirement, we have implemented the full requirements listed under the REACH Directive and the substances listed under SVHC.

In terms of the complete SVHC list, as updated December 2011, we are happy to confirm that all the Irreversible Strips and Indicators supplied by TMC do not contain any chemicals as listed on SVHC.

The SVHC list can be obtained at the following:

http://echa.europa.eu/chem_data/authorisation_process/candidate_list_table_en.asp

We trust that the above meets with your requirements and should you require any further clarification then please do not hesitate to contact us.

Thanking you in advance

Yours sincerely

pp Chris Chapman
Laboratory Manager
